Education

National Institute of Technology (NIT) Srinagar

Bachelor of Technology (B.Tech), Computer Science

2023–2027

Skills

Languages: C++, Go, JavaScript

Backend: Node.js, Express.js, Go

Frontend: React.js, React Native, HTML, CSS

Databases: MongoDB, MySQL

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks, System Design

Technologies: REST APIs, WebSockets, JWT Authentication

Tools: Git, GitHub, Postman

Experience

Software Development Intern — Elevance Skills

Internship

- Developed a RedBus-inspired bus booking web application using React.js, Node.js, Express.js and MongoDB.
- Built authentication, route search and REST APIs for booking management.

Projects

Healify – AI Healthcare Platform

[GitHub](#)

- Built a healthcare platform where users can book doctors and view real-time slot availability.
- Designed a slot booking system to handle multiple users simultaneously without conflicts.
- Used WebSockets to send live updates for booking status and delivery notifications.
- Developed a location-based delivery system (1–3 km) to assign the nearest delivery person.
- Integrated an AI chatbot to suggest basic health advice based on user symptoms.
- Created backend APIs to handle requests efficiently and ensure smooth data flow.

Real-Time Chat Application

[GitHub](#)

- Built a real-time chat application where users can send and receive messages instantly.
- Implemented an online/offline status system to track user activity in real time.
- Added features such as follow/unfollow and story upload, similar to social apps.
- Managed user sessions and real-time data updates across multiple users.
- Ensured fast and reliable message delivery using efficient real-time updates.

ShopSwift – E-commerce Platform

...[GitHub](#)

- Developed an e-commerce platform with product listing, cart, and order management systems.
- Integrated Razorpay for handling online payments along with a cash-on-delivery option.
- Built an admin panel to manage orders, users, and payment status efficiently.

BlogForge – Blogging Platform

[GitHub](#)

- Built a blogging platform where users can create and manage posts easily.
- Added an AI-based content generation feature to generate blogs from a title input.

Achievements

- Solved 450+ DSA problems across LeetCode and GeeksforGeeks.
- Strong understanding of Arrays, Strings, Trees, Graphs, Dynamic Programming and Sliding Window.
